

Using your measurement as shown to the left from your shotgun, compare it to the following approximate lengths for the combined extension tube kit / nut for various shotguns. The nuts for each shotgun vary in length causing a slight difference in length amongst the various shotgun brands. You will need to decide which length works best for your specific shotgun and needs. It is quite possible that the selected tube will extend past the end of your barrel. Nordic does not size their tubes to fit flush, they size their tubes based on 2 3/4 inch shell capacity.

The following lengths are approximations and for reference only.

Benelli M1 / M2 / SBE / SBEII

# of Extra 2 3/4 Shells	Extension Tube Length
+2	6.250
